DETAILED ACTION

Allowable Subject Matter

Claims 1-28 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method and system for protecting against buffer attacks. Independent claims 1, 8, 15 and 22 recite the uniquely distinct features of "dividing an executable software program into an executable image, a data image, and an execution history image and classifying a first statement in said execution history image into one of a mutable statement and an immutable statement". Independent claims 6, 13, 20 and 27 recite the uniquely distinct features of "dividing an executable software program into an executable image, a data image, and an execution history image; executing executable statements, local constants, and singly de-referenced pointers in said executable image; and processing data, data write-backs, and data read-backs in said data image, wherein said data image is accessed from said executable image using a computed offset into said data image from said executable image". The closest prior art, Narayanan (US 20030217277), discloses a method for preventing buffer overflow attacks which fails to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
